ABOUT ME

Experienced Data Scientist with 4+ years of experience crafting data-driven solutions through data science, machine learning, and analytics. I'm self-motivated, and despite resource constraints, I've honed my skills by tackling real-world client projects and applying theoretical knowledge to practical challenges. This experience has equipped me to build robust data-intensive applications. Passionate about the power of data to address societal issues in healthcare and agriculture, I bring a relentless drive to learn and a commitment to positive impact. I aspire to contribute to cutting-edge research and push the boundaries of data science.

WORK EXPERIENCE

AI Engineer, CareCloud — **Islamabad**
Oct 2024 - Present

- Built and deployed RAG-based chatbots and Agentic AI solutions using LangChain and LangGraph to enhance automation and decision-making.
- Applied prompt engineering techniques to optimize LLM responses, improving accuracy and user experience across diverse use cases.
- Developed and integrated APIs with Django, Flask and FastAPI, enabling seamless interaction between generative AI tools and enterprise applications.

Data Science Intern, STEMEYE — **Bahawalpur**
July 2022 - Nov 2022

- Developed and implemented machine learning models (Random Forest, Neural Networks) to significantly reduce fraudulent transactions in financial data.
- Streamlined data processing workflows with data pipelines for real-time fraud detection and prevention.
- Created interactive dashboards and reports (Streamlit, Power BI) to effectively communicate complex fraud patterns to non-technical stakeholders.
- Researched and evaluated emerging machine learning techniques (anomaly detection, ensemble methods) to improve data integrity and explore future advancements in fraud detection accuracy.

Data Scientist , Fiverr — **Remote**
July 2022 - Present

- Mastered exploring data to uncover hidden patterns and fine-tuning data for better machine learning results for Fiverr clients.
- Used a variety of machine learning and deep learning models like linear regression, logistic regression, SVMs, KNN, k-means, RNNs, CNNs, and ANNs, and incorporated optimization techniques such as gradient descent and genetic algorithms to customize solutions and significantly improve prediction accuracy.
- Created engaging, interactive dashboards with Streamlit and Power BI to turn complex data insights into easy-to-understand stories for diverse clients.
- Applied deep expertise in data science to consistently deliver client-focused solutions on Fiverr, consistently exceeding expectations and achieving outstanding outcomes.

EDUCATION

Bachelor of Computer Systems Engineering — **Oct 2020 - June 2024**
The Islamia University Bahawalpur

- Major in Data Science.
- Thesis on "Student's Performance Evaluation Using ANN".

ADDITIONAL INFORMATION

- **Technical Skills:** Python, Pandas, Keras, TensorFlow, PowerBI, Visual Studio, Jupyter Notebook, GitHub, MS Office, Data Science, Data Analysis, Machine Learning, Deep Learning, Data Mining, Analytical Skills, Organizational Skills, Leadership
- **Languages:** English, Urdu
- **Course:** 10-Months Certificate in AI Course, Python Crash Course by Google, Data Cleaning on Kaggle, SQL for Data Science by 365-Data Science, Professional Computer Course , English language Course.
- **Projects:** Employee Assistant Chatbot Using RAG, Claim Denial Management Using Agentic AI (Langgraph), Text to Sql using Langchain, Anomaly Detection in RCM Data, Remote Patient Monitoring Eligibility System, Vehicle Entrance System For IUB Using Machine Learning, Forensic Sketch To Image Using DCGAN, EDA Dashboard On Sales Analysis Using Streamlit
